DESIGN EXPERIENCE

Assessment Philosophy & Rubrics

Quick reference drawn from the Design Experience Implementation and Assessment Handbook (Sections 14 and 15)

A. Assessment Philosophy

Design Experience evaluates the contribution of the individual student, not merely the success or completion of the project.

Projects are multidisciplinary, long-term and continuous, so different students contribute at different stages. Assessment is therefore built on five principles:

1	Individual contribution / Students are evaluated on the quality of their own contribution, technical competency, professionalism, documentation, teamwork and innovation.
2	Contribution across project stages / Meaningful contributions are recognized throughout the project lifecycle, irrespective of when the contribution occurs.
3	Holistic assessment / Assessment considers learning, process, competency development and demonstrated outcomes.
4	Evidence-based assessment / Individual marks are supported by verifiable evidence kept in the Design Experience Portfolio / IER notebook.
5	Individual & team achievement / Individual contribution is assessed in relation to team participation and project goals, with evidence clearly attributable to the student.

Where it applies: Design Experience I, II and III, in all five verticals (VIP, EPICS, Industry Research, Technical Competition, Entrepreneurship). A student is always evaluated on his/her contribution during the semester of registration.

Assessment at a glance

Five competencies, common to every vertical and semester (100 marks):

Individual Accomplishments & Contributions 30	Design / Development Process 20	Reflective & Critical Thinking 15	Teamwork & Leadership 20	Oral & Written Comm. / Documentation 15

Four assessment components (100 marks):

Review I- 10	Review II 10	Review III – Final Technical Report / Portfolio / 30	TEE: Project / Work Demonstration + Viva / 50

ICA (Continuous) = 50 marks: Review I + Review II + Final Technical Report / Portfolio. TEE (Final) = 50 marks.

B. Assessment Rubrics

One framework applies uniformly to Design Experience I, II and III, irrespective of semester, vertical, project maturity or the stage at which a student joins. Marks are based on verified evidence of individual performance.

B.1 Five competencies

Competency	Marks	Key evidence	What is assessed
Individual Accomplishments & Contributions	**30**	IER / Portfolio, individual deliverables, prototypes or demonstrations, assigned tasks, design and testing records	Quality, significance, ownership and consistency of the student's individual contribution
Design / Development Process	**20**	Problem definition, user needs, specifications, alternatives, decision records, prototypes, testing, feedback, iterations	Systematic use of the design / development process: analysis, alternatives, decisions and refinement
Reflective & Critical Thinking	**15**	Reflection entries, problem analysis, decision matrices, risk analysis, testing, feedback, lessons learned, future plans	Analysing problems, justifying decisions, evaluating outcomes, learning from feedback, identifying improvements
Teamwork & Leadership	**20**	Team meeting records, task / role records, peer and mentor feedback, participation records, stakeholder interactions	Collaboration, responsibility, communication in the team, leadership where appropriate, support to teammates, contribution to team goals
Oral & Written Communication / Documentation	**15**	IER / Portfolio, reports, presentations, diagrams, meeting minutes, technical documentation	Clarity, completeness, accuracy and professionalism in oral communication and written / technical documentation
TOTAL	**100**		

B.2 Performance levels

Level	% of criterion marks	Descriptor
Excellent (E)	**85–100%**	High competency, independent thinking and consistent, well-supported performance; meaningful contribution to project / team goals.
Proficient (P)	**70–84%**	Effective and reliable competency; work meets expectations and needs only limited guidance or refinement.
Competent (C)	**50–69%**	Essential competency at an acceptable / developing level; core requirements completed, but depth, initiative or evidence may be limited.
Does Not Meet Expectations (N)	**Below 50%**	Required competency not yet demonstrated; work or evidence is incomplete, insufficient or does not show adequate contribution.

The four levels are qualitative descriptors. Where numerical marks are required, the same conversion is applied to every student. Faculty determine the level independently, using verified evidence.

B.3 Evaluation scheme (100 marks)

Category	Component	Marks	Primary purpose	Evidence / Assessment Artifacts
ICA: 50	**Review I – Initial Review**	**10**	Initial individual contribution, problem / design understanding, planning and role definition	Problem statement; need / purpose; stakeholder / user identification; preliminary literature / market survey; feasibility analysis; initial design idea; individual role / responsibility; initial task plan; IER entry
	Review II – Progress Review	**10**	Progress, design/development process, implementation evidence and individual contribution	Updated IER/work log; design alternatives; design decisions; prototype/model; implementation / code/ CAD/ simulation; testing results; progress report; task records; team meeting records; mentor feedback
	Review III – Final Technical Report / Portfolio	**30**	Consolidated individual evidence, reflection, documentation and overall competency development	Final technical report; IER; individual contribution summary; final design / development evidence; testing / validation results; reflection; lessons learned; challenges and solutions; documentation; peer / team contribution evidence
TEE: 50	**Project / Work Demonstration + Viva**	**50**	Demonstration, technical discussion, individual contribution, problem-solving and viva	Working prototype / project demonstration; source code / CAD / simulation/model; test results; presentation; individual demonstration; technical viva; questions on design decisions, implementation, challenges and solutions; IER / evidence verification
TOTAL		**100**		

B.4 Competency-wise Distribution of Marks

Assessment is stage-specific. Not all five competencies are required to be assessed at every assessment stage. Each competency is evaluated at the stage where sufficient and appropriate evidence is available.

Competency	Review I	Review II	Review III	Demo + Viva	Total
Individual Accomplishments & Contributions	4	3	8	15	**30**
Design / Development Process	4	4	4	8	**20**
Reflective & Critical Thinking	–	1	6	8	**15**
Teamwork & Leadership	–	2	7	11	**20**
Oral & Written Communication / Documentation	2	–	5	8	**15**
TOTAL	10	10	30	50	**100**

B.5 Evidence and assessment artifacts

- Design Experience Portfolio / IER notebook with dated individual contributions and reflections.
- Weekly work logs, task allocation sheets, meeting records and mentor feedback.
- Project deliverables: prototypes, demonstrations, source code, CAD files, simulations or technical outputs.
- Stakeholder / user analysis, specifications, design and decision records, testing / validation records, feedback and iterations.
- Peer evaluation, team participation records and partner / industry / community interactions, where applicable.
- Presentations, technical report and final handover documentation.

Assessment is stage-specific. Not all five competencies are assessed at every stage. Each competency is evaluated at the stage where sufficient and appropriate evidence is available. The final competency-wise total is obtained from marks assigned across the relevant assessment stages. One artifact may support more than one competency, but the same aspect of work must not be counted more than once. Faculty verify supporting evidence before awarding marks.
